

Local PRI & CAS

Eliminate capital costs by gaining access to local voice networks

TelePacific offers the ideal way for businesses to handle large volumes of local and long distance voice traffic by utilizing our 2-way PRI or Trunks voice service. Our 2-way PRI provides 23 B-channels to carry voice and one control signaling D-channel that can be configured to meet each individual businesses requirement, effectively managing incoming and outgoing local and toll calls.

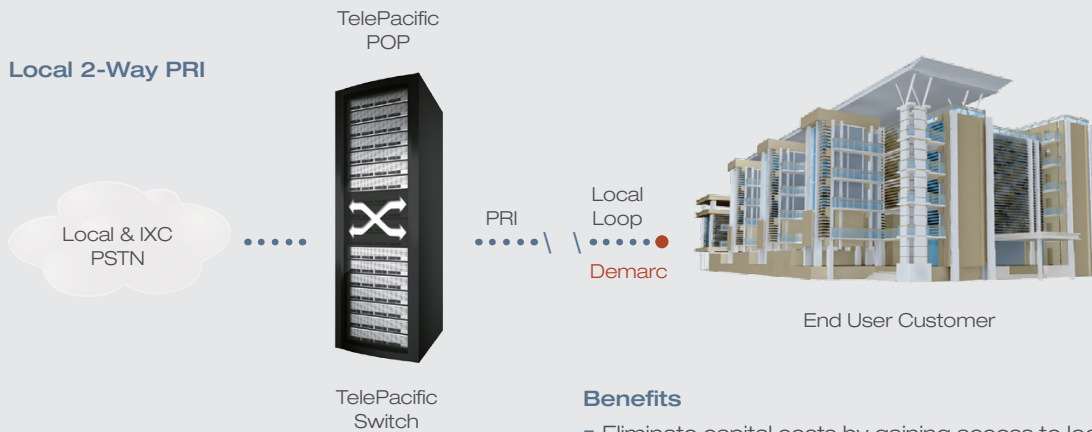

Wholesale PRI/Trunks are used by medium to large enterprises with digital PBXs enabling digital access to the Public Switched Telephone Network (PSTN). Wholesale PRI is available as 2-way and 2-way DID (Direct Inward Dial). Wholesale Trunks may be configured as inbound-only, outbound-only, 2-way and 2-way DID. Both support digital PBX phone equipment.

Standard Features

- PRI: 23B + 1D Channels
- PRI: 2-way or 2-way DID channel support
- PRI: Automatic Channel Selection and Hunting
- PRI: Calling Party Name and Number Identification
- PRI: NI-2 National ISDN standard feature support
- Trunks: 24 Channels
- Trunks: Inbound-only, outbound-only, 2-way and 2-way DID channel support
- Trunks: Trunk groups and Hunting
- Trunks: Caller ID Number
- PRI/Trunks: T1 Local Loop and Channel Termination from LSO
- PRI/Trunks: DID Numbers (Block of 20 included)
- PRI/Trunks: Directory listing for "Primary" location
